Notes on Assignment 8Assignment 9

Announcements

Exam 1: Next Wednesday, 7 PM -No Time Limit

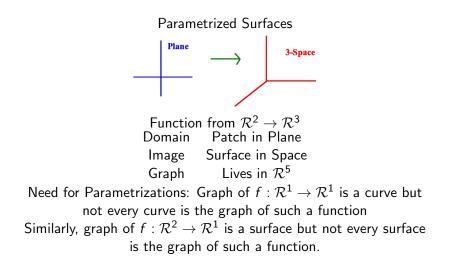

No Books, Computers, Smartphones, etc.

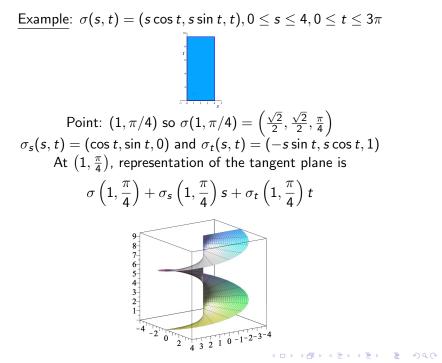

One Page of Notes OK

Focus on Chapters 2 and 3

Tangent Planes To Surfaces (I) $f : \mathcal{R}^2 \to \mathcal{R}^1$, a a point in \mathcal{R}^2 Tangent plane to graph of f at $(\mathbf{a}, f(\mathbf{a}))$: $T(\mathbf{x}) = f(\mathbf{a}) + \nabla f(\mathbf{a}) \cdot (\mathbf{x} - \mathbf{a})$ (II): $f : \mathcal{R}^2 \to \mathcal{R}^3$ $\sigma(s,t) = (f(s,t), g(s,t), h(s,t))$ $\sigma_s(s,t) = (f_s, g_s, h_s)$ and $\sigma_t(s,t) = (f_t, g_t, h_t)$ Tangent Plane at $\sigma(\mathbf{a})$: $\sigma(\mathbf{a}) + (s, t) \begin{pmatrix} f_s(\mathbf{a}) & g_s(\mathbf{a}) & h_s(\mathbf{a}) \\ f_t(\mathbf{a}) & g_t(\mathbf{a}) & h_t(\mathbf{a}) \end{pmatrix}$ Note: $1 \times 3 + (1 \times 2)(2 \times 3)$ Writing vectors vertically: $\sigma = \begin{pmatrix} f \\ g \\ l \end{pmatrix}, \sigma' = \begin{pmatrix} f' \\ g' \\ l' \end{pmatrix}$ Tangent Plane: $T\begin{pmatrix} s\\t \end{pmatrix} = \sigma(\mathbf{a}) + \sigma'(\mathbf{a})\begin{pmatrix} s\\t \end{pmatrix}$

Parametrize Unit Sphere

 $\sigma(s,t) = (\cos t \cos s, \sin t \cos s, \sin s), 0 \le s \le 2\pi, 0 \le t \le 2\pi$

$$x = \cos t \cos s, y = \sin t \cos s, z = \sin s$$
$$x^{2} + y^{2} + z^{2} = \cos^{2} t \cos^{2} s + \sin^{2} t \cos^{2} s + \sin^{2} s$$
$$= \cos^{2} s(\cos^{2} t + \sin^{2} t) + \sin^{2} s$$
$$= \cos^{2} s + \sin^{2} s = 1$$

A D > A P > A B > A B >

- 2

Example: 2 Goods with $u(x, y) = \sqrt[3]{xy}$ Each unit of x costs \$35 and each unit of y costs \$80 We have \$D to spend: Budget Constraint: 35x + 80y = DGoal: Maximize Utility:

$$80y = D - 35x \text{ so } y = \frac{D - 35x}{80}$$
$$u(x, y) = f(x) = \sqrt[3]{\frac{x(D - 35x)}{80}}$$
$$f \text{ is maximized when } \frac{x(D - 35x)}{80} \text{ is maximized.}$$
$$G(x) = x(D - 35x). = Dx - 35x^2. \text{ has } G'(x) = D - 70x \text{ and}$$
$$G''(xx) = -70 \text{ Hence there is a maximum when } x = D/70$$
$$\text{Then } y = \frac{D - 35(D/70)}{80} = D/160$$

Clairaut's Theorem on Equality of Mixed Partials If f_{xy} and f_{yx} are continuous at **a**, then $f_{xy}(\mathbf{a}) = f_{yx}(\mathbf{a})$

May 7, 1713 - May 17, 1765

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ● ●

Clairaut's Theorem on Equality of Mixed Partials If f_{xy} and f_{yx} are continuous at **a**, then $f_x y(\mathbf{a}) = f_y x(\mathbf{a})$

$$f(x,y) = \begin{cases} 2xy\frac{x^2-y^2}{x^2+y^2} & (x,y) \neq (0,0) \\ 0 & (x,y) = (0,0) \end{cases}$$

It Turns Out That

$$egin{aligned} &f_{xy}(0,0)=-2\ &f_{yx}(0,0)=+2 \end{aligned}$$

Mixed Partials Are Not Equal
